

REBECCA GEORGE

RC.LB.George@gmail.com | (512) 487-0566 | [linkedin.com/in/rc-george/](https://www.linkedin.com/in/rc-george/)

EXPERIENCE:

William and Mary

Williamsburg, VA

Undergraduate Research Assistant (Computer Science)

June 2025 - Present

- Wrote C++ scripts to benchmark solve times of GPU-accelerated vs. CPU-only versions of sparse linear solvers
- Automated high-performance computing workflows using Bash scripts with PBS job scheduler on Argonne National Lab's Aurora supercomputer, submitting I/O benchmarks to evaluate DAOS bandwidth, latency, and IOPS
- Visualized results with Matplotlib/Seaborn/Pandas in Python

Thomas Jefferson National Accelerator Facility

Newport News, VA

Student Technical Intern

September 2024 - Present

- Installed and troubleshot Mac, Windows, and RedHat Linux operating systems, file backups, applications, and remote access
- Traced logs, ran diagnostic tests, and identified root causes of diverse issues
- Completed many tasks at once, communicated effectively with users and team members in fast-paced environment
- Managed accounts and authentication methods; Wrote documentation and reference books for the helpdesk
- Maintained PowerShell scripts automating procedures; Used Excel to track and report statistics on group operations
- Supported data center operations including hardware deployment and tape library management
- Wrote Puppetry supporting scientific computing infrastructure

William and Mary

Williamsburg, VA

Undergraduate Research Assistant (Mathematical Plant Ecology)

August 2023 - May 2024

- Integrated real genetic identities into a data-driven milkweed population model (integral projection model)
- Selected generalized linear mixed-effect models for flowering and seed pod production using R
- Created interactive plotly dashboard to explore clonal reproduction characteristics of milkweed using Python
- Prepared milkweed samples for genetic analysis, to analyze genet-size and demographic characteristics

Aromas Coffeehouse Bakery & Cafe

Williamsburg, VA

Barista/Cashier

August 2023 - June 2024

- Balanced cash register, made drinks, took orders, cleaned and sanitized shop
- Improved restocking and closing efficiency with visual aid

FIRST Robotics Competition Team 2881

Austin, TX

Robotics Instructor

July 2018 - August 2024

- Led annual STEM/robotics camps for elementary age Girl Scouts, coordinating volunteer teams and operations
- Developed lesson plans and taught programming and mechanical design with LEGO robots

EDUCATION:

William and Mary - B.S. in Computer Science, May 2026

- *Secondary major:* Computational and Applied Mathematics and Statistics (CAMS), Mathematical Biology track
- *Awards:* Dean's List, Phil Kearns Computer Systems Award

Certificates:

- Ubuntu Linux Professional Certificate by Canonical
- Docker Foundations Professional Certificate

SKILLS:

- Soft Skills: Problem solving, teamwork, time management, communication, troubleshooting, documentation
- Programming: R, Python, C/C++, Bash, Powershell, MATLAB, HTML/JS/CSS, Java
- Misc Software: Linux, Git, Markdown, LaTeX, Google Workspace, Microsoft Office, ServiceNow
- CAD/Design: Solidworks, Bricklink Studio, Procreate
- Life Science Labs: Aquatic ecology, Cellular and molecular biology, ecology and evolution, chemistry
- Languages: English (fluent), German (conversational), Mandarin Chinese (elementary)

PROJECTS:

Scalable: A Rare-Scale Tuner and Visualizer

- (ongoing) Web app for tuning and visualization of sound, with less publicized scales, such as Indonesian Gamelan

Plankton Distribution and Identification Website

- (ongoing) Sampling and identification of plankton in Lake Matoaka at various locations with different influent flows

Comparison and Recreation of Mycelial Growth Models

- *Math 356 - Random Walks in Biology (William & Mary), Spring 2025*
- Reviewed literature on modelling of mycelial growth in hyphal fungi, with a focus on arbuscal mycorrhizae
- Recreated versions of differential equation models using my own implementation of direct numerical methods

Decision Tree Models to Recognize Phishing Websites

- *CSCI 416 - Machine Learning (William & Mary), Fall 2024*
- Trained decision tree, random forest, and XGBoost models on a dataset of website characteristics to predict whether they were phishing websites or not
- Diagnostics and feature importances were extracted and compared for each model

Linear Regression Modelling to Predict Bike Rentals

- *MATH 352 - Statistical Data Analysis (William & Mary), Fall 2024*
- Used model selection and residual analysis to choose a best-performing linear regression model predicting bike rental counts based on environmental and temporal data

Decision Tree and Neural Network Models to Recognize Disruptive Fusion Data

- *AI/ML for Fusion Summer School (William & Mary), Summer 2024*
- Using a dataset of fusion characteristic measurements, created models classifying fusion as disruptive or not
- Compared diagnostics and feature importances for decision tree, random forest, and XGBoost models
- Trained multi-layer perceptrons and bayesian neural networks and compared results

Robotics: Designed and manufactured FIRST robotics competition robots using Solidworks and a variety of power tools (2016-2022), leading the CAD and Outreach teams. Returned seasonally to mentor the CAD and Outreach teams (since 2022).
